# 4247-Z03*plus* Quick Installation and Setup Guide

MAN10294-R01

	add forms or to clear a forms jam). The type of intervention needed appears on the display panel. If not lighted, the printer does not require immediate attention.
Keys	
MENU	Use the Menu function key to enter the Configuration Menu. This function key is valid when the printer is not ready or the printer is ready and no job is in progress. After you enter the Configuration Menu, paper movement functions are not available.
SCROLL/MICRO↑ SCROLL/MICRO↓	Use SCROLL/MICRO or SCROLL/MICRO to perform the following functions: - Adjust forms upward or downward when the printer is not ready. - Scroll through the Configuration Menu categories, parameters, and values. - Scroll through the Operator Print Tests menu items.
TEST	Press TEST to enter the Operator Print Tests menu. The Test function is valid only when the printer is not ready. There are several tests available.
RETURN	Pressing RETURN in the Configuration Manu returns to the previous

If the READY indicator is lighted, the printer is ready to print. If READY is not lighted, the printer is not ready to print. The printer can receive data when this indicator is not lighted, but no

If lighted, the printer is printing or processing data. If blinking, the printer buffer contains data that cannot be printed immediately. If not

If blinking, the printer requires operator intervention (for example, to

lighted, there is no data to process and no data in the print buffer.

data can be printed.

	level of the menu.
ENTER	The Enter function is available when the Configuration Menu or Operator Print Tests Menu is displayed. Pressing ENTER selects the displayed option. The Enter function is also used during some of the tests.
LINE FEED	Press LINE FEED to cause the printer to advance the forms one print line, based on the current LPI setting. If you hold LINE FEED more than four seconds, the forms move continuously until you release the key.
PARK/PATH	Pressing this key causes the printer to enter the Park function in either the ready and not ready state. The continuous forms will backup (reverse the process direction of) the forms in the forms path.
FORM FEED	This key advances the forms so that the next form is at the top of form position. The Form Feed function is available when the printer is not ready.
SET TOP OF FORM	This should only be used when printing occurred and no Top-of-Forms commands have been passed to the printer (such as Form Feed or Printer initialization). The Set Top of Form function is available only when the printer is not ready, and the paper is loaded to the print line. This key can be used only for the continuous forms paper sources. Press SET TOP OF FORM to set the top of form position for continuous paper sources only.
CANCEL PRINT	When this key is pressed while the printer is active and on line, the attachment sends a "cancel request" to the host. For any attachment option, the CANCEL PRINT button clears all print data and buffers. This function is valid only when the printer is not ready.
LOAD/EJECT	The LOAD/EJECT function depends on what active form path you have selected. This section describes the function for each of the paper paths. The LOAD/EJECT key performs the following functions: -Automatically loads forms After the forms are loaded under the sensor and onto the tractors at the bottom of the forms device press LOAD/EJECT to automatically load the forms to the top of form position. - Moves forms to the tear-off position
STOP	If the printer is in a ready state, press STOP to: -Make the printer not ready and cause the READY message to disappear from the operator panel display -Stop printing as soon as possible without losing print data -Stop a test if the printer is in test mode -Stop the printer alarm from beeping -Allow you to use the other printer function keys If an error condition appears on the operator panel display, press STOP to: -Clear the error message from the display -Stop the printer alarm from beeping.
START	Press START to perform the following functions: -Make the printer ready and cause the READY message to appearing the operator panel display. -Exit the Configuration Menu and make the printer ready. If a partial reset is required, it is performed to put configuration changes into effect before the printer becomes ready.
MENU	Use the Menu function key to enter the Configuration Menu. This function key is valid when the printer is not ready or the printer is ready and no job is in progress. After you enter the Configuration Menu, paper movement functions are not available.
Printing the	First Document

The Quick Reference is a popular print test that may help familiarize you with the operator panel keys and the configuration menu you can set. The Quick Reference printout allows you to check print quality and printer operations.

- 1. Each key is listed with a corresponding description to the right.
- 2. Each parameter is shown with the corresponding values you can select printed to the right.
- 3. Ensure that the printer is off line. If the printer is ready, press **STOP** to make the printer not ready
- 4. Press TEST Press SCROLL/MICRO Up or SCROLL/MICRO Down until the printer displays:

5. Press **ENTER** or **START** to print this test. The READY indicator comes on and printing begins. Press **STOP** if you want stop the Print Test before it completes printing.

6. Wait for the printer to stop printing and the READY indicator to go off.

7. Press **FORM FEED** until you can remove the printout. The printout should be clear and readable.

# YOU HAVE JUST COMPLETED A SETUP AND CHECK OUT OF THE PRINTER.

We recommend that you now print your printer configuration defaults. Save this printout for future reference. You can create a printout of the printer configuration by following these steps: 1.Press SCROLL/MICRO Up or SCROLL/MICRO Down until the

printer displays:

To exit Print Test, press **RETURN** to make the printer not ready or **CANCEL PRINT** to make the printer ready.

Press ENTER or START to print this test. See "Print Custom Sets" in the User's Guide for more information about this printout.

# Configuring the Printer

See the User's Guide on the CD-ROM for information about how to

## 3

#### make and save printer configuration setting changes

## Installing the optional second tractor

A second optional tractor is available for your printer. This tractor may be installed on the first (standard) front tractor.

- 1.Open the tractor area cover.
- 2.Unpack the second tractor.
- 3.Align the hooks on both sides of the second tractor with the pins on the first tractor. Push the second tractor on the pins until it is fully engaged.
- 4.Connect the second tractor to the first using the electrical cable/connector provided on the tractor.
- 5.Rotate the tractor gear protection cover downwards to free the gear. 6.Rotate the second tractor into the closed operating position.
- 7.To load paper onto the first tractor when the second tractor is

installed, rotate the second tractor outstands insert paper between the two tractors.

## Removing and Installing the Controller Board

The printer is shipped with the controller board already installed. The following operations explain how to remove the controller and install a new one into the proper slot in the back of the printer before it can be used.

**Attention**: Do not remove the Controller Board from the protective package until instructed to do so. Static electricity, though harmless to you, can damage sensitive Controller Board components.

Attention: Ensure that the printer is powered off before installing or removing the Controller Board.

1. Use the screwdriver that came in the Controller Board box to

remove the controller board on the back of the printer by unscrewing the two screws.

2. Align the left and right sides of the Controller Board with the guides in the printer and slide it into the slot.

3. Gently push the new Controller Board into the printer until it is seated in the connector inside the printer. The Controller Board is correctly seated in the printer when the Controller Board metal plate is aligned with the back profile of the slot.

4. Firmly fix the Controller Board with the two captured screws using the screwdriver that came in the Controller Board box.

## Maintenance - Cleaning the printer

Periodic cleaning will help keep your printer in top condition so that it will always provide optimal performance. Before you clean the printer: 1. Turn off the printer.

2. Unplug the power cord.

3. Wait at least 15 minutes for the printhead to cool before starting this procedure

#### **Cleaning inside the Printer**

Every few months, use a soft brush and a vacuum cleaner to remove dust, ribbon lint, and pieces of paper. Remove the ribbon cartridge to prevent the ribbon from going into the vacuum cleaner. Vacuum any dust from around the print head and in the printer cavity.

### Cleaning the outside covers

Clean the outside of the printer with a damp cloth and mild soap. Do not use any spray-type or chemical cleaners anywhere on your printer. Do not put any liquids or spray near the air vents. For stubborn ink stains on the cover, use a commercial mechanic's hand cleaner. Do not use an abrasive cloth, alcohol, paint thinner, or similar agents

	3. Reload forms onto the tractor.
	<ol> <li>Close the top cover.</li> <li>Press LOAD/EJECT to load forms.</li> </ol>
	6. Press START to restart the job.

Problem: Unreadable characters 1. The ribbon is dry or worn. Solution: Check the ribbon and replace it if it is dry or worn. The Automatic Forms Thickness Adjustment (AFTA) setting for the paper source you are using needs to be decreased. Paper must be loaded for this adjustment to be effective. Solution: See the procedure for adjusting the AFTA through the operator panel (see "Printer adjustments" in the User's Guide). 3. Poor quality multiple-part forms. Solution: Try new forms (Fast Draft) A Bidirectional adjustment needs to be made. Solution: See the procedure for setting the bidirectional adjustment (see "Bidirecional adjustment" in the User's Guide). Forms thickness exceeds forms specifications. Solution: Use forms that meet specifications (see "Continuous Forms specifications" in the User's Guide). Problem: Missing dots or irregular characters 1 The ribbon is wor Solution: Check the ribbon for wear; replace it if necessary. 2. The ribbon is twisted or folded. Solution:Straighten the ribbon. The Automatic Forms Thickness Adjustment (AFTA) setting for the paper source you are using needs to be changed. Paper must be loaded for this adjustment to be effective. Solution: Set the procedure for adjusting the forms thickness setting through the operator panel (see "Printer Adjustments" in the User's Guide). Problem: Ribbon smudging forms 1. The ribbon is twisted or folded. Solution: Try to moving the printhead back and forth while turning the ribbon advance knob. If the ribbon advance knob does not turn, replace the ribbon. 2. The Automatic Forms Thickness Adjustment (AFTA) setting for the paper source you are using needs to be increased. Paper must be loaded for this adjustment to be effective. Solution Set the procedure for adjusting the forms thickness setting through the operator panel (see "Printer Adjustments" in the User's Guide). 3. The ribbon cartridge is defective Solution: Replace the ribbon cartridge. A new ribbon is over-inked. Solution: Replace the ribbon. Problem: Printing is too light or partial characters print 1. The Automatic Forms Thickness Adjustment (AFTA) setting for the paper source you are using needs to be changed. Do not attempt to manually move the AFTA wheel. Paper must be loaded for this adjustment to be effective. Solution: Set the procedure for adjusting the forms thickness setting through the operator panel (see "Printer Adjustments" in the User's Guide). 2. The ribbon guide is seated incorrectly or the white snap arm is not snapped into place. Solution: Remove the ribbon and reinstall it. Problem: Ribbon snagging, tearing or not moving 1. The ribbon is worn Solution: Replace the ribbon cartridge 2. The ribbon cartridge is not properly installed. Solution: Remove and then reinstall the same ribbor Problem: Line-to-line horizontal misregistration 1. The dot registration of the characters printed is not aligned. Solution: See "Printer adjustments" in the User's Guide. Configuration problems Problem: Printer does not print or prints wrong characters 1. Nothing is printed or the wrong characters print. Solution: Ensure the printer cable is attached to the host. Assure the configuration menu parameters values for your printer attachment (see "Parallel, Serial, USB and LAN Configuration" in the User's Guide) Miscellaneous problems Problem: Printer has no power 1. The power cord is not connected. Solution: Ensure the power cord is plug into the back of the printer and also in the wall outlet Problem: Throughput o printer at half speed 1. The Quiet Print function is set on. olution: Ensure the Quiet Print" function is the Printer Configuration menu is disabled **Clearing Forms Jams** Use the following procedure to clear forms jams from the printer. 1. Open the top cover. 2. Tear off the forms at perforation before it enters the printer and after it exits the printer. 3. Open the tractor doors and remove forms from the tractors 4. Try to move the printhead off of the form and to the far right. Do not force it. Remove jammed forms by pulling in the direction of the printing.
 If the jam cannot be removed, lightly pull the form in the opposite direction. 7. If the jam still cannot be removed, remove the paper bail assembly a. Remove the ribbon cartridge b. Grip the paper bail assembly and rotate it toward the front of the printer until the pivots posts on the sides disengage from the printer frame c. Lift the bail assembly out of the printer and set it aside. d. Removed jammed forms by polling in the direction of the printing. 8. If you removed the paper bail assembly in the previous step, reinstall it, as follows: a. Grip the paper bail assembly as shown in the illustration. Important! To avoid damaging the plastic, ensure the plastic points down

(see "Printer Specifications" in the User's Guide) Print quality and ribbon problems

1. The first print position I adjusted incorrectly.

Solution: Check your settings for the left margin, tear position and the paper load position
